

SRIM - **SNS** Rapid Implementation Methodology

SRIM creates partnerships by getting you involved from the beginning. Throughout the process, SRIM draws insights from a wide range of disciplines, including management, technology, finance, and supply chain logistics.

SRIM can be adapted to any company's needs, size, technology and supply chain structure using procedures and documents that are based on easy-to-customize templates.

SRIM provides an exceptional degree of project tracking, reporting and visibility.

Project Initiation

Establishes project guidelines and plans. The plan is based upon realistic and attainable implementation goals for the customer and SNS. Once a good project plan has been developed, a Kick-Off meeting is held to start the implementation process.

Phase II.

Business Review Summit

Confirms the proposed business processes and their interaction with the system. Requirements are reviewed and confirmed for System Configuration, Integration, and Installation. Development requirements are defined.

Readiness Review and Sign Off

Ensures that both the customer and SNS are ready to proceed to Phase 3. Design and Development will begin only when senior management of both parties has signed off on the Readiness Review Agreement.

Phase III.

Design & Development

Design, develop, test and configure the software, hardware, and operational components of the agreed upon deliverables in the project plan.

Phase IV.

Deployment & Training (UAT)

Complete the final physical integration of hardware, software, and operational procedures in preparation of the Go-Live.

Readiness Review and Sign Off

At this point, another readiness review is conducted to ensure that both the customer and SNS are ready to proceed to the go-live phase. Senior Management of both parties must sign off on the Readiness Review Agreement before the implementation can proceed to Phase 5.

Phase V.

Create a seamless transition into full production. It is the goal of each SNS Implementation team to ensure go-live will be a "non-eventful event".

Phase VI.

Closure & Support Transition

Formalize the project closure and complete transition to the SNS Customer Support Team.
